Portfolio Highlights

Investment Objective and Policies ▶ To seek long-term growth of capital. Under normal market conditions, the fund invests at least 80% of its net assets (plus any borrowings for investment purposes) in the common stocks of companies expected to benefit from the development, advancement, and/or use of science and technology. For purposes of satisfying this requirement, common stock may include equity linked notes and derivatives relating to common stocks, such as options on equity linked notes. Current income is incidental to the portfolio's objective.

Managed in a Style Similar to ▶ T. Rowe Price Science & Technology Fund

Why Consider this Portfolio

- ▶ You want potential long-term growth of capital and can accept the relatively high levels of risk and volatility inherent in concentrating in one sector of the market
- ▶ You want exposure to a wide range of industries within the technology sector, including computers, software, telecommunications, media, and information services

How this Portfolio Invests

Investment Process ▶ T. Rowe Price seeks to maintain a core portfolio of diversified technology stocks in the large- to mid-capitalization range with good appreciation prospects. The portfolio manager identifies secular themes and long-term trends to help guide stock selection. Ultimately, however, the manager uses a bottom-up (company specific), stock-by-stock approach to make final decisions. Stock selection generally reflects a growth approach based on intensive research that assesses a company's fundamental prospects for above-average earnings. Holdings can range from small, unseasoned companies developing new technologies to blue chip firms with established track records of developing and marketing technology. RCM managers use both top-down and bottom-up research and analysis to select holdings. RCM uses fundamental research and proprietary Grassroots Research to affirm company analysis or macroeconomic trends. They evaluate each investment idea by assessing each company's prospects for growth, quality, and valuation. Their top-down process leverages the expertise of an internal economics staff, which helps to develop a perspective regarding relative industry performance.

The underlying fund concentrates its investments in a sector of the market. A portfolio of this type may be riskier or more volatile in price than one that invests in more market sectors. Due to the volatile nature of science and technology stocks, this portfolio may be subject to increased fluctuations.

Refer to the disclosure page for more information including risks associated with this investment account.

Page 1 of 2 - Not valid without all pages

Allocating assets to only one or a small number of the investment options (other than Lifestyle options) should not be considered a balanced investment program. In particular, allocating assets to a small number of options concentrated in particular business or market sectors will subject your contract to increased risk and volatility. Examples of business or market sectors where this risk may be particularly high include: a) technology-related businesses, including Internet-related businesses, b) small-cap securities, and c) foreign securities. We do not provide advice regarding appropriate investment allocations. Contact your financial advisor for more details.

The investment objectives and policies of the underlying portfolios may be similar to those of other funds managed by the same asset manager. There is no guarantee that any portfolio's investment results will be comparable to the investment results of another fund, including other funds with the same asset manager. Investment results will differ and may be higher or lower than the investment results of other such funds.

This material is neither an offer to sell nor a solicitation to buy securities. The information is current as of December 31, 2011, unless otherwise noted, and is not a guarantee of subsequent portfolio composition, which is subject to change at the discretion of the portfolio manager.

This material describes the underlying Portfolio options for Venture Variable Annuities and is authorized for distribution only when preceded or accompanied by a current prospectus for the relevant product of John Hancock Life Insurance Company (U.S.A.) (John Hancock USA), John Hancock Life Insurance Company of New York (John Hancock New York) and for John Hancock Variable Insurance Trust (JHVIT), which contains details on investment objectives, risks, fees, charges, and expenses, as well as other information about the investment company. Please read the prospectus containing this and other information on the product and the underlying portfolios and consider these factors carefully before purchasing.

Annuity contracts contain exclusions, limitations, reductions of benefits, and terms for keeping them in force. Your licensed sales professional can provide you with the costs and complete details.

John Hancock Life Insurance Company (U.S.A.), Bloomfield Hills, MI, (which is not licensed in New York) with its annuity service office in Portsmouth, NH, and securities offered through **John Hancock Distributors LLC** through other broker/dealers appointed by John Hancock Distributors LLC, 197 Clarendon Street, Boston, MA 02116. In New York, Venture Annuities are issued and administered by John Hancock Life Insurance Company of New York, Valhalla, NY.

Unlike mutual funds, the variable products have insurance-related fees and charges associated with them. Venture Annuities and the optional riders are not available in all states; product features may vary, subject to state regulation. Variable annuities are not FDIC insured, are long-term contracts designed for retirement purposes, and are subject to investment risk, including the possible loss of principal. Withdrawal charges apply to withdrawals taken in excess of the withdrawal amount available without a withdrawal charge during the surrender charge period. All withdrawals reduce the death benefit and optional benefits. In addition, withdrawals of taxable amounts will be subject to ordinary income tax and, if made prior to age 59½, a 10% IRS penalty tax may apply. For use with policy form number series VENTURE.100, Venture.100-001-NYREV-06, and Venture.100-NY-REV-06. VENTURE.100.015.07-NY, VENTURE.100.C.07-NY. Individual contract form numbers may vary depending on state of issue. Past performance is not a guarantee of future results.

This material was prepared to support the promotion and marketing of variable annuities. John Hancock, its distributors, and their respective representatives do not provide tax, accounting, investment, or legal advice. Any tax statements contained herein were not intended or written to be used, and cannot be used for the purpose of avoiding U.S. federal, state or local tax penalties. Please consult your own independent advisor as to any tax, accounting, investment, or legal statements made herein.

When considering an annuity for use in an IRA or other tax-qualified retirement plan (i.e., 401(k), 403(b), 457), it is important to note that there is no additional tax-deferral benefit, since these plans are already afforded tax-deferred status. Thus, an annuity should only be purchased in an IRA or qualified plan if some of the other features of the annuity are of value, such as access to specific portfolio choices, the ability to have guaranteed payments for life, and other guaranteed benefits, and you are willing to incur any additional costs associated with the annuity to receive such benefits. See the prospectus for details.

Some portfolios invest primarily in the securities of small and medium-sized companies. The risks associated with investments in small companies include less experienced management, limited product lines and financial resources, shorter operating histories, less publicly available information, reduced liquidity, and increased price volatility.

P/E is a valuation ratio of current share price compared to per-share earnings, or market value per share divided by earnings per share. Beta is used to measure the volatility of a fund in comparison to the market. R² is a statistical measure of the percentage of a fund's movements that can be explained by movements in its benchmark index. Turnover (annualized) is a measure of how often assets within a fund are bought and sold by the fund manager, over a twelve month period.

REITs involve risks such as refinancing, economic conditions in the real estate industry, changes in property values, dependency on real estate management, and other risks associated with a portfolio that concentrates its investments in one sector or geographic region.

The High Yield Trust portfolios invest primarily in lower rated or unrated securities. High risk, high yield securities are considered to be speculative with respect to the payment of interest and the return of principal and involve greater risks than higher grade issues. They are especially subject to the adverse changes in general market conditions and in the industries in which the issuers are engaged, to changes in the financial conditions of the issuers, and to price fluctuations in response to changes in interest rates.

Investing in securities of foreign companies and governments involves considerations and potential risks not typically associated with investments in domestic corporations and obligations issued by the U.S. Government. Funds are allocated in international/global/emerging markets. Variable subaccounts could be subject to risks associated with changes in currency values, economic, political, and social conditions, the regulatory environment of the countries in which the fund invests, as well as the difficulties of receiving current and accurate information.

The securities markets of many of the emerging markets in which the portfolio may invest are substantially smaller, less developed, less liquid, and more volatile than the securities markets of the United States and other more developed countries.

Not FDIC Insured	Not Bank Guaranteed	May Lose Value
Not a Deposit		Not Insured by Any Federal Government Agency

An investment in the U.S. Government Securities portfolio is neither insured nor guaranteed by the FDIC, U.S. Government, or any U.S. Government agency.
